SENIOR BACKEND ENGINEER

Senior Backend Engineer with 7+ years of experience building scalable backend systems. Strong background in designing reliable systems and improving performance through asynchronous processing and event-driven architectures.

Experienced working with c# .Net environment, contributing to backend services in cloud environments using AWS and Azure. Focused on writing maintainable and well-tested code, with experience using automated testing practices. Enjoy collaborating with cross-functional teams, mentoring engineers, and contributing to continuous improvement in growing product environments.

EXPERIENCE

Backend Engineer | Tech Lead - AMV Solutions - Spain

- Introduced asynchronous processing, reducing response times and improving handling of concurrent workloads
 - Led refactoring of legacy backend systems, improving maintainability and reducing development time for new features
 - Helped move parts of the system towards an event-driven approach, reducing tight coupling between components
 - Reduced CPU and database load by removing unnecessary polling and optimizing backend workflows around 20 to 30 percent improvement
 - Migrated gRPC services to a code-first approach, simplifying development and reducing maintenance effort
-

Software Engineer - Blueberry Consultants - UK

- Developed real-time features improving responsiveness for end users
 - Built and maintained a notification system using AWS EventBridge, improving reliability and reducing missed events
 - Helped stabilise backend systems, reducing incidents and improving overall reliability
-

Software Engineer - Travel Services - Argentina

- Reworked financial data workflows, reducing query times and improving response speed by 50 %
 - Built an integration framework to support multiple external providers, making onboarding easier
 - Improved backend structure and data models, making the system easier to maintain and extend
-

SKILLS

Backend and Architecture

REST APIs, Microservices, Event-Driven Architecture, and Scalable Systems

Languages: C#, PHP, Dart, Language Agnostic Developer

Databases: SQL, NoSQL **Cloud and DevOps:** AWS ,Azure, Docker, CI/CD

Testing and Quality: TDD

Practices: Clean Architecture, SOLID, Agile Scrum

EDUCATION & ADDITIONAL

Bachelor of Computer Science, University of Havana

3 times ICPC Cuban Finalist

Languages

Spanish Native

English Professional
